

Member 2: Backend Discovery Engine - Full Guide

1. Running the Backend

Use the following commands in your project root directory:

```
# Start the server
python -m uvicorn app.main:app --reload

# If port 8000 is blocked, use a different port:
python -m uvicorn app.main:app --reload --port 8001
```

2. Accessing the Interface

Once the terminal shows "Application startup complete", open this in your browser:

```
http://127.0.0.1:8000/docs
```

3. What to do after the page opens

Follow these steps in the Swagger UI:

- Scroll to **GET /api/v1/ad-discovery/**.
- Click the row to expand it.
- Click the **"Try it out"** button.
- Fill in a **brand_name** (e.g., "Nike").
- Click **"Execute"** at the bottom.
- Review the **Response body** for the aggregated JSON output.
